Litespeed's geometrically enhanced tube shapes address cycling frame stresses in ways that standard round tubes simply cannot.

Cycling technology is advancing at the speed of light; or you might say Litespeed! Because no other manufacturer of titanium bicycles has more proprietary design and manufacturing processes for enhancing the natural performance characteristics of titanium than Litespeed.

During the pedaling cycle, each tube on the frame encounters different stress forces. The computer model shows how the stress lines on the seat tube follow the tube straight down, indicating a bending stress. By contrast, the stress forces on the downtube cross over the tube, indicating a torsion (twisting) stress. Round tubing as a singular shape simply cannot adequately address the various directional stresses found in the bicycle frame. Changing diameters and wall thickness does help, but only at minimal levels.

Litespeed's all new geometrically enhanced tube sets address the unique directional stresses found in each tube of the bicycle. Using the cold-working process, we create shapes and grain structures that are "stress-directional specific." As the market leader Litespeed has spent the past decade developing cycling specific titanium tubing, and these new tube sets represent the pinnacle of innovation and design.

(Just what you'd expect from the company that continually advances the art and science of titanium bicycles—Litespeed.)

This computer model visualizes the varying stresses in a bicycle frame during the pedaling cycle. Arrows indicate the direction of stress; brighter colors indicate higher levels of stress.

WHY WE BUILD TITANIUM BICYCLES

At Litespeed we use titanium because it is the best material available in the world today for ultra high-performance bicycle frames. Ounce for ounce, the alloys of titanium we use in our bicycle frames are significantly stronger than the best aluminum, carbon fiber, or steel frames. Our titanium alloys have a fatigue life that is up to five times that of aluminum or steel. Furthermore, due to its molecular structure, titanium has the unique ability to damp vibrations without deadening the overall feel of the bike and without significant energy loss. Add it all up and you've got a ride with the liveliness of high quality steel tubes, the shock absorbency of good carbon fiber, and the stiffness of aluminum—what has become commonly referred to as titanium's "magical ride" quality.

Tests show Litespeed titanium is superior over all other materials including scandium.

COMMITMENT—ONLY FROM LITESPEED

Titanium has become the benchmark in high performance cycling. It's not unusual to see other materials advertised as "stronger than—better than—lighter than" titanium. What these brands don't advertise is that none of them carry a warranty longer than five years, and many less than that. For example, scandium frames have minimal warranties—some as short as one year. Carbon fiber also carries a minimal warranty period. What kind of message does this send about their commitment to quality, value and safety?

At Litespeed we put our heart and soul into every bicycle frame we build—and we back it all up with a lifetime warranty.*

Why titanium? This computer simulation compares fatigue stress levels of a bicycle frame at work. The bright colors represent high fatigue stress. Note the low stress level colors on the titanium frame, illustrating that ounce for ounce titanium is the superior material for frame construction.

*For details on our warranty, contact us or check out our website at: www.litespeed.com.

THE HIGHEST QUALITY—ONLY FROM LITESPEED

At Litespeed, we use only the highest quality titanium alloys in the world—all aerospace-certified grades or better. However, good materials mean nothing without quality craftsmanship and proper manufacturing controls. Every craftsman at Litespeed must live up to the same standard—perfection—backing up Litespeed's Quality Assurance Program, which is based on the most stringent aerospace standards. No bicycle company in the world has a better Quality Assurance Program than Litespeed.

EXTENSIVE COLD-WORKING—ONLY FROM LITESPEED

Cold-working is the process of shaping a metal at room temperature. When cold-worked, certain metals will increase in strength. Litespeed is the only bicycle manufacturer in the world to extensively cold-work tubing for bicycle frames. Litespeed's cold-worked titanium is approximately 45% stronger than the standard titanium other frame builders use. This increase in strength allows us to further enhance the performance of all our frames.

UNMATCHED WELD INTEGRITY—ONLY FROM LITESPEED

How can Litespeed frames withstand 2 million simulated pedal strokes with a 400-pound load? Weld integrity. Our welding craftsmen must pass a rigorous apprenticeship before they begin welding our frames. Their welds must be perfect, because at Litespeed we do not allow the multi-pass welding techniques other companies use to cover up flawed welds. We are the only titanium frame builders in the world to use parent metal-matched filler metals and laboratory-pure argon gas for the welding process. Why go to so much trouble? Simple: Because quality craftsmen using quality materials provide flawless weld joints with superior strength. We guarantee it.

CUSTOM FRAMES FROM LITESPEED

At Litespeed we have an amazing selection of titanium frames in stock, ready for your order. While many professionals are able to find the perfect fit and performance characteristics among our stock frames, some choose to have bicycles custom built at Litespeed. However, this option is not exclusively for the professional athlete—we can custom build for you, too. Whether you want a custom mountain, road, or track frame—or even a copy of a World or Tour De France champion frame—we are ready to build a Litespeed just for you. The same craftsmen who create the finest performance bicycles for national and world champions are ready to build your dream bicycle.

To learn more about custom-built frames, or to get the Litespeed pros started on your own custom dream machine, just contact us.

Litespeed

R O A D

Screaming acceleration.

Precise handling.

Superb cornering.

Rail-like stability.

These are the hallmarks of Litespeed road bikes. And the reasons Olympic, World and National champions continue to choose Litespeed. The same craftsmanship and materials used to build the bikes that win Tour de France victories are put into every Litespeed road bike. These same qualities serve as the baseline for our Year 2000 designs. The all-new geometrically enhanced tubes add unbeatable strength, comfort, and aesthetic appeal. One ride on any of these new designs and you'll understand why Litespeed road bikes continue to be the most desired bikes in the world.

ARENBERG (ar en bərg), -n. 1. the famed forest section in Paris-Roubaix where cobblestones are large and rough. 2. the tight-tracking Litespeed road bike that makes easy work of any road surface, new for the year 2000.

ACCESSORIES

I) TITANIUM MOUNTAIN handlebar
3Al-2.5V cold-worked, seamless bulge design
23 1/4" length, 3 degree bend
Weight: 160 g
Finish: Brushed \$ 95

J) ALUMINUM MOUNTAIN handlebar
2014 double butted, laser etched
23 1/4" length, 3 degree bend
Weight: 155 g
Finish: Black \$ 30

K) TITANIUM MOUNTAIN threadless stem
3Al-2.5V cold-worked, removable face plate
5 degree rise, 1 1/8"
Sizes: 120, 135
Weight: 180 g
Finish: Brushed \$ 255

L) TITANIUM MOUNTAIN seat post
3Al-2.5V cold-worked
Size: 330mm length, 27.2mm diameter
Weight: 198 g
Finish: Brushed \$ 120

M) TITANIUM ROAD seat post
3Al-2.5V cold-worked
Size: 230mm length, 27.2mm diameter
Weight: 167
Finish: Brushed \$ 110
Polished \$ 120

N) TITANIUM ROAD quill stem
3Al-2.5V cold-worked
14 degree rise, 1"
Sizes: 90, 100, 110, 120, 130
Weight: average 190 g
Finish: Brushed \$ 235
Polished \$ 250

O) TITANIUM ROAD threadless stem
3Al-2.5V cold-worked
14 degree or 0 degree rise, 1" or 1 1/8"
Sizes: 90, 100, 110, 120, 130
Weight: average 150 g
Finish: Brushed \$ 235
Polished \$ 245

P) BARTAPE by Off The Front
Neoprene, washable, reusable, durable
Blue, Black, Yellow \$ 14

Q) LITESPEED APRON
Navy Blue, 2 pockets
One size \$ 15

Mountain Bikes

- SID XC 63mm—provides 2.5 inches of travel
- SID SL 63mm—provides 2.5 inches of travel
- SID Race 63mm—provides 2.5 inches of travel

Road Bikes

- Look
- Time
- Chrome-Moly straight bladed Cyclo-cross fork
- Litespeed Chrome-Moly Touring Fork

* Specifications are subject to change and other options may be available.

GEOMETRY

All of our road frames are measured in centimeters, all mountain frames are measured in inches. We measure all of our road and mountain frames in the center-to-top format, which is from the center of the bottom bracket shell to the point where the center line of the seat tube intersects with the top side of the top tube (except for the Blade and the Saber, which are measured from the center of the bottom bracket shell to the top of the seat tube). The top tube on all our bikes is measured from the intersection of the center line of the top tube and the center line of the seat tube, measured parallel to ground to the intersection with the steering axis center line. (Blade and Saber top tube are measured parallel to ground from center of the top of seat tube to intersection with steering axis center line). Frame geometry is based on the following fork lengths measured from the axle center to the crown race seat (plus a lower stack height of 12mm): 650c road/time trial frames: 341mm fork, 700c road frames: 369mm fork, 700c cyclo-cross & touring frames: 400mm fork, 700c tandem frame: 388mm fork, 26" mountain frames: 434mm suspension fork at 20mm compression. Standover height is measured static.

All our bikes utilize a 27.2mm seat post and a 68mm English threaded bottom bracket. All of our mountain and road bikes utilize a 1 1/8" steerer except for Arenberg, Classic, Blue Ridge and Appalachian, they feature a 1" steerer. The following front derailleurs are needed for the following models: all mountain bikes (1 3/8" top pull), Arenberg (1 1/4" bottom pull), Tuscany, Vortex, Palmarès, Taliani, Blue Ridge and Appalachian (1 3/8" bottom pull), Classic, Ultimate, Saber and Blade (braze-on bottom pull).
